

CV Wahyu Karya

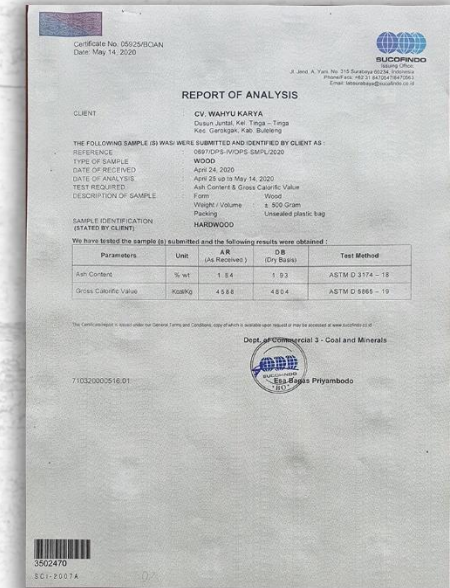

Wood Pellet Development

The company manufacturing process produce sawdust and wood waste ±5tons per day. Sawdust and wood waste pile up, so at 2019, Wahyu Karya did diversification, created a new business line, wood pellet. Usually, wood pellet used as a heater for room, cooking, boiler, and fuel for power plant. Wahyu Karya use several woods to make wood pellet, consist of bangkirai, kapur, keruing, meranti, and sengon wood. Wahyu Karya will keep innovate to produce the best quality product.

Products

Wood Pellet at Wahyu Karya consist of three types, based on the raw materials : Hardwood, Mix (50% hardwood and 50% softwood), and Softwood. In May 2020, Wahyu Karya wood pellet lab test were out from Sucofindo and the result are :

- Hardwood** : ±4804 calor value ash content <2%
- Mix** : ±4770 calor value ash content ≤2%
- Softwood** : ±4739 calor value ash content <3%

Our History

Wahyu Karya is an integrated wood manufacturing company based in Buleleng, Singaraja, Bali, Indonesia. Wahyu Karya was established in 1997 by starting the business as a sawmill, processing raw materials log into sawn timber. Since then the company has grown to become one of the sawn timber producers in the province of Bali.

The company expanded product types, such as plywood in 2010 and derivative products from wood in the form of blockboard, bare core, and moulding wood.

Right now, the company employs around 250 peoples with the experienced workforce in accordance with their respective fields so able to produce good quality products.
